ZURICH GRADUATE COLLOQUIUM

Tuesdays, 5:15 pm
Hermann Weyl Zimmer, ETH Zentrum
in alternation with the
Zurich Colloquium in Mathematics

Speaker: **Sebastian Baader (Basel)**

Title: **Knot invariants from the fundamental group**

Date: Tuesday, May 24th

It is easy to define the complexity of a knot, but usually hard to compute it. The fundamental group proves to be a useful tool for estimating such complexities. We shall illustrate this by means of simple diagrammatical considerations.
